**Amendments to the Specification**

Please replace paragraph [0017] with the following amended paragraph:

[0017] As best illustrated in FIGS. 3 and 5, the plate engaging surface 38 may be configured to be releasably engageable with the top surface 56 of the second attachment plate 28. This may also be accomplished by the use of a device for releasably securing the plate engaging surface 38 to the top surface 56. The device includes four tab receiving holes 42 configured to receive engagement tabs 44 of the second attachment plate 28. The tab receiving holes 42 include a preferably circular portion 45 and a narrower slot region 46 extending therefrom. As will be explained further below, the circular portion 45 is configured to receive the preferably oval or circular tab 48 of the engagement tab 44 and the slot 46 is configured to restrict the circular tab 48 while allowing free movement of the stem 50 of the engagement tab 44. The slot 46 is shaped like a traditional skeleton key hole. The circular tab 48 can be either centered on the stem 50 of the engagement tab 44 (FIG. 2) or alternatively, slightly offset as illustrated in FIGS. 3 and 5).
